

WatchNET

WatchNET allows you to keep an eye on things without having to be there. Whether you need to monitor traffic, require security surveillance, or just want a view of something different, with WatchNET you can 'see it' from just about anywhere.

The combination of network-enabled video cameras and CityLink's multi-gigabit CBD access network provides unprecedented flexibility for the positioning of cameras where you need them. Digital images provided by our cameras can be watched on your private network or broadcast publicly on the Internet - there are a range of viewing options to meet your requirements.

WatchNET Features and Benefits:

- **Access live video at any time, from anywhere**
You can access real-time video at any time from any computer, anywhere. Our network video cameras capture and distribute high quality video over a private IP network or the Internet. You are able to view your images from a web browser anywhere in the world.
- **Put the cameras wherever you want**
There are almost no limitations as to where you can place a network video camera within the CityLink network coverage area.
- **Scalability to grow with your needs**
WatchNET can be easily expanded by adding more network cameras. You can choose exactly what you need today, and scale the system at any time to meet your growing needs.

- **Flexible access options**

There are options for making the video images accessible publicly or privately (via password authentication) on the internet, or delivered to a private network.

- **Video storage solutions**

CityLink has video storage options available. We have partner organisations who can assist with providing a solution to meet your needs.

About CityLink:

CityLink has been providing innovative solutions over our Serious Broadband* network since 1995.
